

Project Proposal

FINAL PROJECT

PROJECT OVERVIEW

Objective

I am an active user of music streaming services like Pandora, and Spotify. Although both offer a way to like or save songs to build lists of the songs you like, they don't provide any metrics on that data to be further analyzed. I want to export my spotify data and use it to see trends in my listening habits. In addition to the data import. the project will incorporate a spotify player embed into the site that will be controlled by voice to play anything in my playlist or on spotify.

Goals

Build a site to run on Node.js that will run from a raspberry pi server and allow voice control of the spotify player and stream to wireless bluetooth speakers.
